## 100 People

There are approximately seven billion $\left(7 \times 10^{9}\right)$ people in the world.
In the 1990s researchers calculated that if there were just 100 people in the world

- there would be 20 children
- 25 people would not have food and shelter
- 17 people would speak Chinese
- 8 would speak English

1. What fraction of people in the world do not have food and shelter? $\qquad$

How many people in the world do not have food and shelter? $\qquad$
2. How many more people in the world speak Chinese than speak English?
3. Approximately $3 \times 10^{8}$ people live in the USA. In the world of 100 people, how many would live in the USA?
